A far more complete annotation record is available from FlyBase (http://flybase.bio.indiana.edu/) through the FlyBase Annotation Object linked by the db_xref qualifier in the Feature Table.

IMPORTANT: This sequence is NOT necessarily the entire insert of clone 118B3. It may be shorter, since we are minimising the overlap between clones to 100 bases, by trimming them. Clone 118B3 overlaps to the left with clone 11F6

The true left end of clone 118B3 is at position 34769 of clone 11F6 Clone 118B3 overlaps to the right with clone 115C2 The true right end of clone 118B3 is at position 385 of clone 115C2 Sequence in absolute orientation with respect to chromosome Clone=118B3; Contig ID=14; Length=2463; Status=Finished The syntax for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Consortium

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AUTHORS
TITLE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             JOURNAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 91773 GTCGGAGGAGTGGTACGGCGTCTGGGGATCCCG
IMPORTANT: This sequence is not the entire insert of clone RP5-1135K18 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap. The true left end of clone RP5-1135K18 is at 1 in this sequence.
                                                                                                                                                                                                                       The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at
                                                                                                                                                                                                                                                                                                                                               This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                             from the library RPCI-5 constructed institute by the group of Pieter de
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Submitted (15-SEP-2000) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SEQUENCING READ COVERAGE: Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones.

consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ll repeats were identified using RepeatMasker:
nit, A.F.A. & Green, P. (1996–1997)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (bases 1 to 179752)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (bases 1 to 179752)

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  these are useful as purposes, e.g. for target site within
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               acid sequence. Alternatively, the vector construct comprises a nucleic facid, operatively linked to a promoter, encoding a polypeptide to be fused with streptavidin, and a cloning site for insertion of a second nucleic acid encoding at least 129 amino acids of streptavidin or its functional variant. The fusion proteins are useful for targeting tumour cells associated with cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              linked to a promoter, and a cloning site for insertion of a succeic acid sequence encoding a polypeptide to be fused with streptavidin, interposed between the promoter and the first n

expressed

Monitoring differential expression of genes in filamentous uses fluorescence; labeled nucleic acids isolated from the

s fungal cells cells and a

expression of genes in a first filamentous rungal (re)
expression of the same genes in one or more second filamentous fungal
cells. The method uses fluorescence-labeled nucleic acids isolated from
the FF cells and a substrate of expressed sequence tags (EST). The ESTs
in a first filamentous fungal (FF) cell relative to expression of genes
in a first filamentous fungal (FF) cell relative to expression of the The present invention describes a method fo expression of genes in a first filamentous

ψ.

The present inventor affirst filamentous tungal (rr) certaingal expression of genes in a first filamentous tungal (rr) certaingal expression of the same genes in one or more second filamentous fungal cells. The method uses fluorescence-labeled nucleic acids isolated from the FF cells and a substrate of expressed sequence tags (EST). The EST cells and a substrate of expressed sequence tags (EST) are the methods for monitoring differential expression of ger
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     adapt to changes in culture conditions, environmental stress, spore morphogenesis, recombination, metabolic or catabolic pathway engineering. Using ESTs provides several advantages over genomic or random cDNA clones including elimination of redundancy as one spot on an array equals one gene or open reading frame, and organisation of the microarrays based on function of the gene products to facilitate analysis of the results. AAF0478 to AAF11247 represents ESTs from Apergillus Fusarium venenatum; AAF11248 to AAF11853 represents ESTs from Aspergillus niger; AAF11854 to AAF14878 represents ESTs from Aspergillus oryzae; and AAF14879 to AAF1337 represents ESTs from Trichoderma reeset, which are all specifically claimed in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WO200056762-A2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAF07727;

                                                                                                                                                                                                                                                                                                                                                                                                                                             PB;
```

genes

polypeptide (II) sequences: (I) is useful as hybridisation probes, polymerase chain reaction (PCN) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags

Claim 1; SEQ ID No 1007; 103pp; English.

The invention relates to isolated polynucleotide (I) and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      adapt to changes in culture conditions, environmental stress, spore morphogenesis, recombination, metabolic or catabbolic pathway engineering. Using ESTs provides several advantages over genomic or random cDNA clones including elimination of redundancy as one spot on an array equals one gene or open reading frame, and organisation of the microarrays based on function of the gene products to facilitate analysis of the results. AAF07478 to AAF11247 represents ESTs from Fusarium venenatum, AAF1124 to AAF11853 represents ESTs from Aspergillus oryzae; and AAF11879 to AAF18537 represents ESTs from Trichoderma reesei, which are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         in a first filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal cells. Monitoring the global expression of genes from FF cells allows the production potential of the microorganisms to be improved. New genes may be discovered, possible functions of unknown open reading frames can be identified and gene copy number variation and stability can be monitored. The expression of genes can be used to study how FF cells
                                                                                                                                                                                                                                                                     New isolated polynucleotide and encoded polypeptides, diagnostics, forensics, gene mapping, identification or responsible for genetic disorders or other traits and biodiversity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             operon from Pseudomonas fluorescens strain 33. The operon comprises 3 genes where the termination codon of the first gene overlaps with the initiation codon of the second gene. The sequences of the encoded proteins have 60, 44 and 46% homology respectively to the tijbBCD proteins from Serratia marcescens. The novel gene and protein can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Local

quantitating a a food sur-
           polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as
                                                                                                                                                                        The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                    The present invention describes an expressed sequence tag (EST), wher the EST is an isolated, enriched, or purified nucleic acid sequence representing all or part of a gene, the expression of which, or its complementary sequence, in a cell identifies the cell as a developmentally competent or incompetent cell. Molecules which induce developmental competence in a cell line are useful for inducing totipotence in one or more cells. Molecules which induce developmental incompetence in a cell line are useful for preventing a full term pregnancy in an animal and inhibiting totipotence. The molecules are also useful for treating a disease in an animal by inducing developmental course cells of the animal into a specific cell type. The present sequence represents abvine EST which is given in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the internation. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WI at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity
                                                                                                                                                                                                                                                 An expressed sequence tag (EST), the expression of which, complementary sequence, in a cell identifies the cell as developmentally competent or incompetent cell -

New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity biodiversity

Drmanac RT, Liu C,

Tang YT;

2001-639362/73. DB; ABG19249.

(HYSE-) HYSEQ INC.

Claim 1; SEQ ID No 19240; 103pp; English

CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polyperase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, are also used in diagnostics as expressed sequence tags (C to restore normal activity of (II) is useful in gene therapy techniques (C II). (II) is useful for generating antibodies against it, detecting or creating of sites expressing (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating CC diagnostics involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in CC diagnostics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and CC amino acid sequences. AAS64197-AAS94564 represent novel human CC diagnostic coding sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed cast introub, but was obtained in electronic format directly from WIPO at fravelonic to the printed of the product of the printed cast of the invention. at ftp.wipo.int/pub/published\_pct\_sequences. The invention on relates to isolated polynucleotide (I) and (II) sequences. (I) is useful as hybridisation probes,

CC isolated from lymph node stromal cells of fsn // mice. The CC polynucleotides and their polypeptides are useful for treating an CC inflammatory disorder, disorder of immune system and cancers, a from epithelial, lymphoid, myeloid, stromal and neuronal cancers, a CC growth of blood vessels. The polypeptides are useful for treating an CC growth of blood vessels. The polypeptides are useful for treating a CC growth of blood vessels. The polypeptides are useful for treating a CC from arthritis, inflammatory bowel disease and cardiac failure and a CC fibroblast growth factor-mediated disorder, such as those selected CC fibroblast growth factor-mediated disorder. It is also useful in assays CC corresponding ligands or receptors, to quantify levels of protein or CC cognate corresponding ligand or receptors, as antinflammatory agents, cand in compositions for the treatment of skin, connective tissue and CC tissue, as a chromosome marker or tags in the identification of a xxx genetic disorder.

                                                                                              Matches
                                                                                                                                                                                        Sequence 3425 BP;
                                                                                                                                                                                                                                                    protein/membrane protein expression. The nucleic acids and complementary sequences may also be used as DNA probes in diagnostic assays (e.g. polymerase chain reactions (PCR)) to detect and quantitate the presence of similar nucleic acid sequences in samples. They may also be used to study the expression and function of secretory proteins/membrane polypeptides and their role in metabolism. The polypeptides may be used as antigens in the production of antibodies against them and in assays to identify modulators (agonists and antagonists) of expression and activity. The antibodies and antagonists may also be used as therapeutic agents to down regulate expression and activity. The antibodies and antagonists may also be used as diagnostic agents for detecting the presence of the polypeptides in samples (e.g. by enzyme linked immunosorbant assay (ELISA). Examples of diseases which may be treated include rheumatoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention relates to nucleic acid sequences AAF93744 - AAF93916 which encode human secretory or membrane proteins represented by AAB8317 - AAB88419. Included in the invention are primers AAF94295 and AAF62232 - AAF62235 which are used to isolate to CDNA sequences of the invention. The invention also includes methods for the production of antibodies directed against the proteins, and cDNA sequences, which can be used in vaccines. The polynucleotide sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleic acids encoding secretory proteins/membrane proteins, useful in gene therapy or as candidate target molecules in drug development -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      sequences, which can be used in vaccines. The polynucleotide sequences can be used in gene therapy. The polynucleotide sequences and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate secretory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 1; SEQ ID 7; 609pp + CD ROM; English.

ITK is a phytic acid (Myo-inositol 1,2,4,5,6-hexaphosphate) biosynthetic enzyme. The ITK enzymes of the CC 1,2,3,4,5,6-hexaphosphate) biosynthetic enzyme. The ITK enzymes of the CC invention may be prepared recombinantly and used to raise antibodies, CC which are used for detecting the enzymes in situ in cells or in vitro CC in cell extracts. The polynucleotides of the invention may be used to CC create transgenic plants in which the ITK levels are present at higher CC viewer levels than normal, or in cell types or developmental processes where they are not normally found. This would alter the level of CC 1,3,4-triphosphate 5/6 kinase found in those cells. In addition, it may CC be desirable to eliminate expression of ITK genes for certain applications. The polynucleotides of TK genes for certain CC inked to those genes, and to isolate homologous sequences from other CC species, as well as for physical mapping, as markers for traits candinated to improved feed efficiency. The proteins of the present contribution lead to a better understanding of the phytic acid biosynthesis of anathur, allowing it to be exploited for commercial uses. A in a final continual contribution is a supplication of the present contribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Cahoon RE,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Inositol 1,3,4-triphosphate 5/6-kinase; phytic acid; genetic myo-inositol 1,2,3,4,5,6-hexaphosphate; biosynthetic enzyme; animal feed; ss.
